

SkinVision

Skin cancer detector
and health advisor

With a **Select or Tailored Health Cash Plan** from **Health Shield**, you can provide your people with access to the additional wellbeing service **SkinVision** - delivered through a smartphone app, that allows users to self-examine their skin for signs of skin cancer.

Check skin spots and moles with an app

SkinVision empowers members to manage their skin health at home. It bridges the gap between self-assessment and professional dermatological advice, guiding users on when and how to effectively care for their skin.

Powered by AI and skin health experts

SkinVision has detected nearly 50,000 skin cancer cases combining AI with skin health professionals and dermatologists. With up to 95% sensitivity in detecting common signs of skin cancer, users can track their skin over time by organising and commenting on photos.

Helping people detect skin cancer early

SkinVision is ideal for people who want to take a proactive approach to their skin health, particularly those concerned about skin cancer. Members can receive a personalised risk indication within 30 seconds.

**Wellbeing
Service**

How to use SkinVision:

Smart check camera

Use it to inspect your skin and receive an immediate risk assessment.

Body map

Create your own, set reminders and monitor skin spots regularly for any changes.

Personalised advice

Identify your skin type and risk profile, get tailored advice on protection against skin cancer risk.

Our digital wellbeing services, including SkinVision, are designed to support our members' health. These can be accessed online through a Member Account or via Breeze, our wellbeing app.
